

MAKSIM RYZHOV

Frontend Product Engineer

Remote · UTC+5 | [GitHub](#) | [Telegram](#)

PROFILE

Frontend-focused product engineer building responsive web experiences, developer tools, and reliable release paths. I work from observable product behavior backward: inspect the running system, make a bounded change, add focused tests, and verify the result in the browser or delivery environment.

SELECTED PRODUCT WORK

Tunika | Live commerce platform · private source

Role: Product engineering across responsive UI, catalog publication, browser media, operational safeguards, and release verification.

- Delivered catalog and product-page behavior across desktop and short mobile viewports, including filters, sorting, badges, fabric units, and JPG/WebP/AVIF selection.
- Hardened Go-backed publication and reconciliation so incomplete output does not replace the known-good catalog; acceptance checks the public product after release.

Mansara | Interactive residential Alpha · private source

Role: Frontend interaction architecture, responsive experience, asset validation, and browser QA.

- Connected a 120-image building turntable, nine facade views, floor selection, a sample apartment journey, and a six-stop park walkthrough into one stateful browser flow.
- Kept the presentation evidence-bounded with explicit demo data, responsive fallbacks, keyboard-aware controls, and no claim of continuous real-time 3D or engineering geometry.

PUBLIC DEVELOPER TOOLS

[Viewport Sentinel](#) — TypeScript CLI and GitHub Action for deterministic page-by-viewport Chromium checks with JSON and SARIF evidence.

[Hermes Agent for VS Code](#) — Review-first VS Code client for a self-hosted agent bridge, with file, selection, screenshot, and code-edit context.

ENGINEERING PRACTICE

Responsive UI · deterministic tests · browser-visible QA · release gates · rollback-aware delivery · explicit product limitations

TECHNOLOGY

TypeScript · React · Next.js · JavaScript · Node.js · Go · Playwright · GitHub Actions · HTML/CSS
